

H. Clark Hale, D.D.S., Inc.

April 25, 1984

A note to let you know our status in the office with the use of the Acuscope in treating TMJ dysfunction and associated musculo-skeletal pain in the cervical, upper back, and shoulder areas.

We have been using the Acuscope in this region for three years now and are finding this treatment mode becoming more valuable all the time.

We use it in two (2) different treatment modes; one, locally in area of dysfunction and two, along acupuncture meridian points. As our experience and expertise increases, so does our effectiveness. I hope you will have the same experience.

Sincerely,

H. Clark Hale, D.D.S.
